E-mail

Email Configuration

The generic parameters for configuring email clients for all email addresses with the domain @ co.it.pt are as follows.

Incoming settings

Protocol	IMAP
Server Name	imap.co.it.pt
Security	SSL
Port	993
Authentication Method	*Password* (normal)
User	<your email> (for example, jferreira@co.it.pt)
Password	<your password>

Outgoing settings

Protocol	SMTP
Server Name	smtp.co.it.pt
Security	STARTTLS
Port	587
Authentication Method	*Password* (normal)
User	<your email> (for example, jferreira@co.it.pt)
Password	<your password>

Webmail

You can access IT's webmail through https://webmail.co.it.pt

E-mail

Webmail

The webmail system is based on Zimbra, that has the following features:

- Self organizing folders
- Fast, advanced (in messages and attachments), writable, multi-folder searches
- Conversation view with multi-folder support
- Filters
- Full calendar
- Rich Web interface, multi-platform - browser and operating system
- Ubiquitous Access - Anywhere, Any Device
- Secure attachment access with no need for additional software
- Collaborative system based on modern technologies

You can access DEEC's webmail through https://webmail.co.it.pt

Networks & Connectivity

Eduroam Configuration

The Telecommunications Institute is covered by a wireless network, thus allowing transparent and fast access to the network and the Internet.

Two networks are available, whose names (SSID) are IT-Coimbra and EDUROAM. The IT-Coimbra network has local addressing common to the wired IT network, allowing access to the resources there (for example, printers). The EDUROAM network is integrated into the European network, so it only allows access to the Internet and not to local resources. Both are configured in the same way, which will be described below.

Regarding technical specifications, the definitions to be used for network access are as follows:

Definition	Description	Value to set
Wireless Type	Types of wireless networking technology that supports wireless networking	802.11 a/b/g/n Bandwidth up to 900Mbps per space Support for 2.4GHz and 5GHz frequencies
SSID	Wireless Network Name	IT-Coimbra / EDUROAM
Wireless Protection	Wireless Encryption System Type	WPA 2 (AES/CCMP, Dynamic)
Authentication (802.1X)	Method of authenticating a device / user to a protected network	EAP-PEAP + MSCHAPv2
Certificate Validation	Digital Certificate Verification and Validation System	Do not check / Disabled
Login	Login of the user who wants to connect to the network	Email address with the format @it.uc.pt (for example, user@it.uc.pt)
Password	Password of the user who wants to connect to the network	Password of the respective account

In case of difficulty, you can contact the Helpdesk service, through the helpdesk@co.it.pt address.

Security

Security

Authentication and Account Password

IT has a centralized authentication system, that is, a unique identification system, which allows all its users to access the various informed services, using the same authentication credentials - the same username and password.

Given the degree of criticality of this keyword, which allows access to multiple computer services, were used according to the following rules:

- A keyword must have at least eight characters and three different variants (uppercase, lowercase, numbers and punctuation);
- The password must be renewed periodically by the user;

You can change your password at https://password.co.it.pt

VPN

VPN

OpenVPN

OpenVPN offers a flexible VPN solution to ensure the security of communications data, whether to guarantee privacy on the Internet or remote access by employees to the internal resources of organizations.

VPN

VPN installation manual on windows

OpenVPN Installation, Configuration and Run Guide on Windows

Introduction:

This document will present, step by step, the installation, configuration and execution of OpenVPN on the Windows operating system.

Preparation:

Before starting the installation and configuration of OpenVPN on your computer, you should check the following point:

- Have an account for the configuration of OpenVPN, which is requested from the Management Office of the Computer Network.

Installation:

To download OpenVPN just go here, and below you will find the respective download.

1640

Then, perform the respective installation.
1634

1635

1636

1637

Configuration:

For your configuration, you should download IT.ovpn e movê-lo a “**C:\Program Files\OpenVPN\config**”.

1638

Execution

To finish, you will have to start the program “OpenVPN GUI” which, with its execution, will show an icon of a monitor with a lock on your task bar.

1641

With the right side of the mouse over the icon, click on Connect and enter the credentials obtained by GRI.

1642

VPN installation manual on Ubuntu

OpenVPN Installation, Configuration and Execution Manual on Ubuntu 18.04.2 LTS

Introduction:

This document will present, step by step, the installation, configuration and execution of OpenVPN on the Ubuntu operating system.

Preparation:

Before starting the installation and configuration of OpenVPN on your computer, you should check the following point:
Have an account for the configuration of OpenVPN, which is requested from the Management Office of the Computer Network.

Installation:

To use *OpenVPN* just run the following command "**$ sudo apt-get install network-manager-openvpn-gnome**".

1652

When the installation is complete, restart the network-manager service.
1653

Configuration:

For your configuration, you must download IT.ovpn. Use the mouse to go to the network manager icon to go to “***Edit Connections …***”, then “***Add a new connection***” and create a connection with “***Import a saved VPN configuration…***”.

1654

1655

1656

1657

1658

Then select the IT.ovpn file and enter the IT credentials. If you want, you can change the Connection name to an easier name to identify the IT VPN.

1659

1660

Execution:

Finally select the network manager icon, go to VPN Connections and select the created VPN.
